

ASSIGNMENT – 14

Create and Elastic IP for an instance

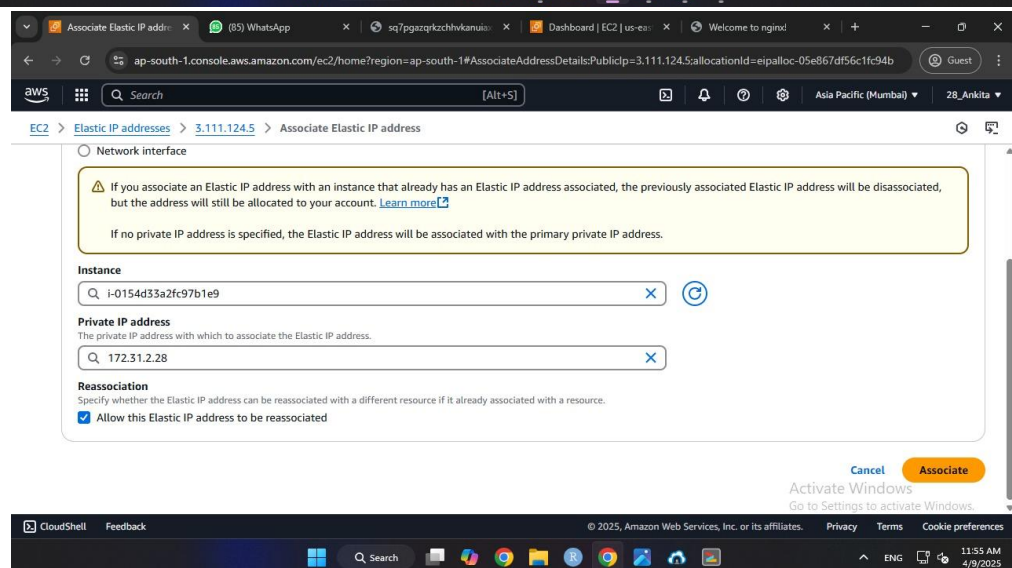

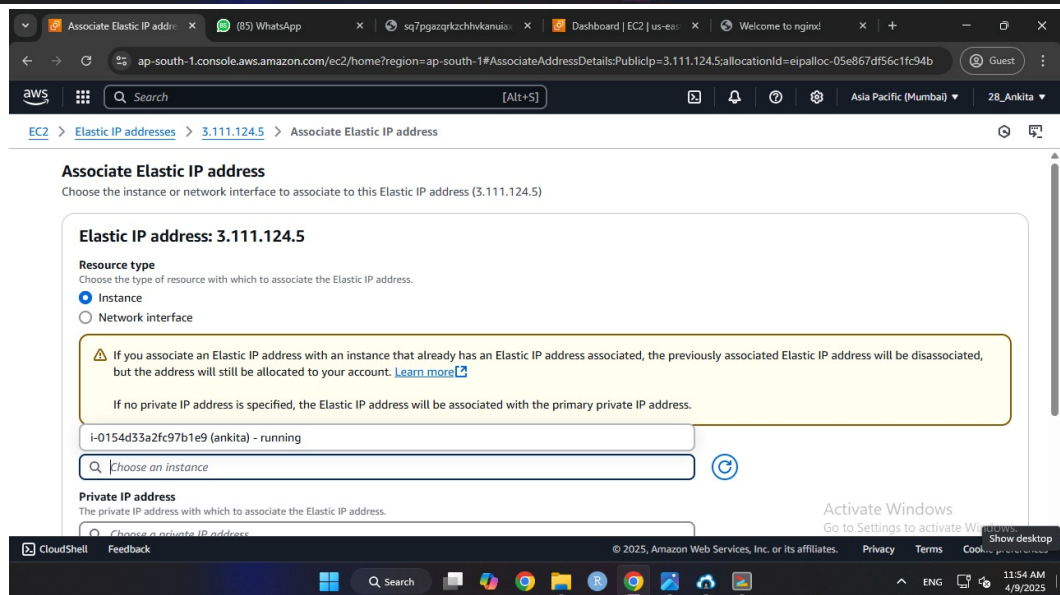

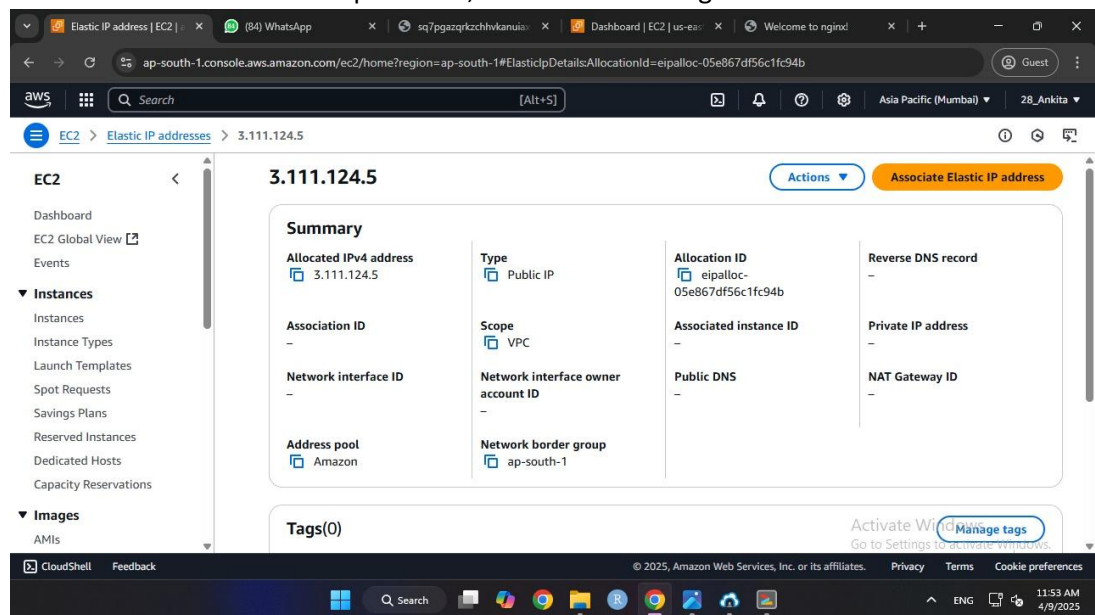

Step 1: First go to the ec2 and then create an instance. Log in to bitwise terminal and do update and upgrade it and then install nginx, then copy the IPV4 address and open it another window.

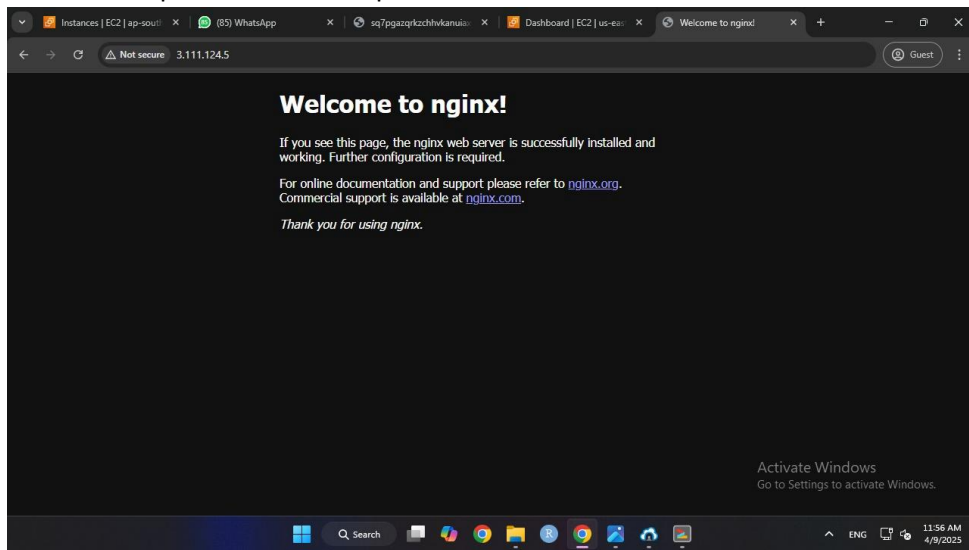

Step 2: then go to the elastic ip and allocate elastic ip address

Step 3: then click on the associate elastic ip address, choose the running instance and associate

Step 4: then copy the allocate ipv4 address and open it in another window

Step 5:-Now to delete the ip address we click on action -> dissociate elastic ip address and then release elastic ip address.
