28_Ankita

IAM > Security credentials > Assign MFA device

1 Select MFA device

Step 2

Set up device

Select MFA device

MFA device name
Device name
This name will be used within the identifying ARN for this device.

Maximum 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)

MFA device
Device options
In addition to username and password, you will use this device to authenticate into your account.

☐ **Passkey or security key**
Authenticate using your fingerprint, face, or screen lock. Create a passkey on this device or use another device, like a FIDO2 security key.

☒ **Authenticator app**
Authenticate using a code generated by an app installed on your mobile device or computer.

IAM > Security credentials > Assign MFA device

1 Set up device

Authenticator app

A virtual MFA device is an application running on your device that you can configure by scanning a QR code.

1

Install a compatible application such as Google Authenticator, Duo Mobile, or Authy app on your mobile device or computer.
[See a list of compatible applications](#)

2

Open your authenticator app, choose **Show QR code** on this page, then use the app to scan the code. Alternatively, you can type a secret key.
[Show secret key](#)

3

Type two consecutive MFA codes below
Enter a code from your virtual app below

Wait 30 seconds, and enter a second code entry.

Step-5:

Multifactor authentication is added to the account.

The screenshot shows the AWS IAM console interface. On the left, the navigation menu includes 'Identity and Access Management (IAM)', 'Access management', 'Access reports', and 'CloudShell'. The main content area displays 'Security credentials' for the user '28_Ankita'. A green notification banner at the top states 'MFA device assigned'. Below this, the 'Account details' section shows the account name '28_Ankita', email address 'ankitabarui03@gmail.com', and AWS account ID '976193249230'. The 'Multi-factor authentication (MFA) (1)' section shows one MFA device assigned, with a table listing its details: Type (Virtual), Identifier (arn:awsiam:976193249230:mfa/ankita_MFA), Certifications (Not Applicable), and Created on (Tue Feb 18 2025). The 'Access keys (0)' section is also visible.

Step-6:

Now during login MFA code is required.

The screenshot shows the AWS login page. At the top, there is a banner for 'Try the new sign in' with an 'Enable new sign in' button. Below this, the AWS logo is displayed. The 'Multi-factor authentication' section explains that the account is secured using MFA and provides the email address 'ankitabarui03@gmail.com'. A text input field for the 'MFA code' contains the value '928607', and a blue 'Submit' button is below it. Links for 'Troubleshoot MFA' and 'Cancel' are also present. On the right, there is a large advertisement for 'AWS re:Invent' with the text 'Automate code reviews with Amazon Q Developer - get immediate feedback on your code so you can iterate faster' and a 'Learn more' button. The footer shows the copyright notice '© 2025, Amazon Web Services, Inc. or its affiliates. All rights reserved.', a 'Multi-session disabled' status, and a language dropdown set to 'English'.
