

Assignment No:03

Title: Create IAM User and give full access to S3.

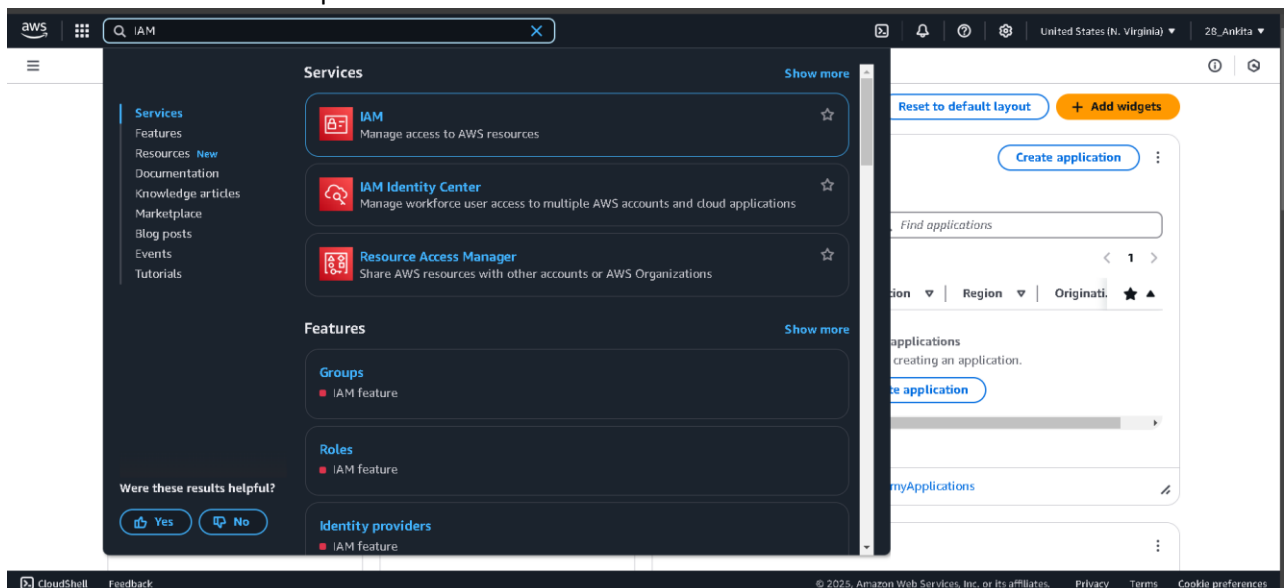

Step-1:

Open the AWS Management Console and click on services on the top left corner.

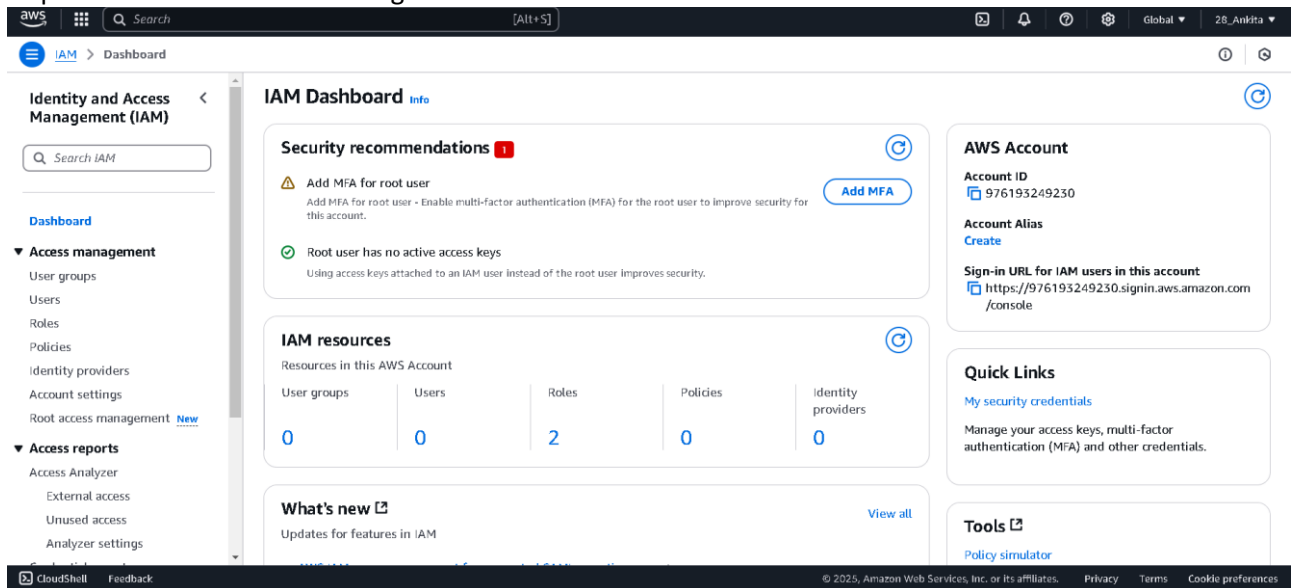

Step-2:

Click on all services and open the IAM.

Step-3:

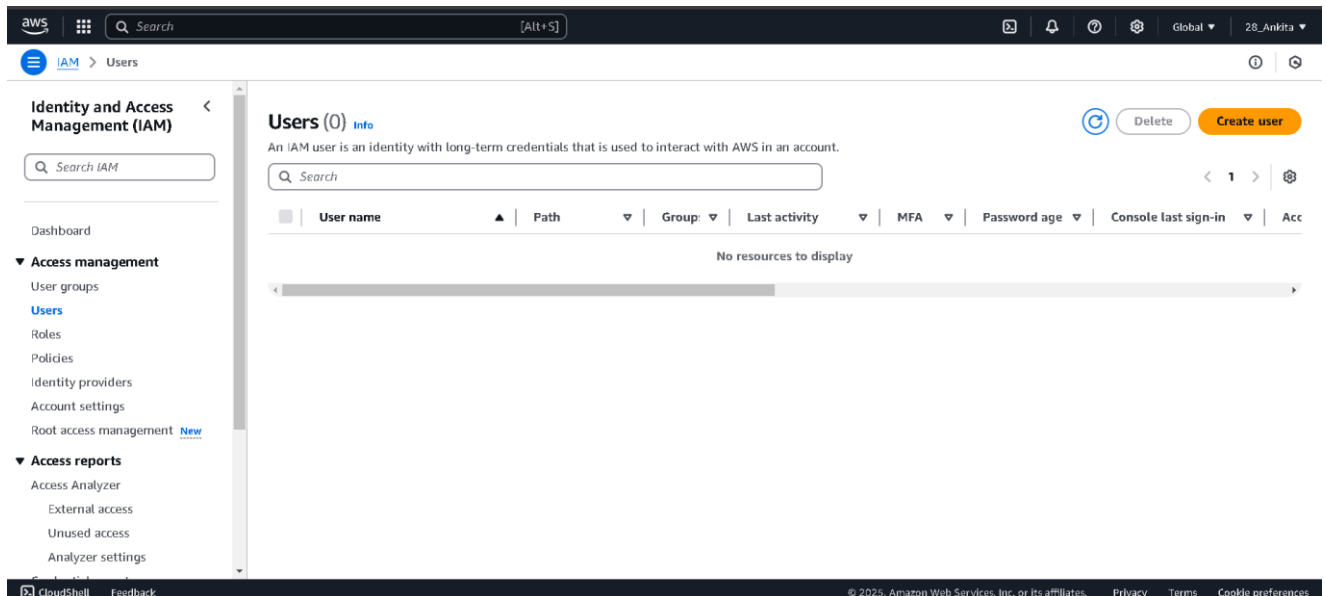

Open the Users in Access management in the left side.

The screenshot shows the AWS IAM Dashboard. The left sidebar is titled 'Identity and Access Management (IAM)' and includes a search bar and a navigation menu with sections: 'Dashboard', 'Access management' (containing User groups, Users, Roles, Policies, Identity providers, Account settings, and Root access management), and 'Access reports' (containing Access Analyzer, External access, Unused access, and Analyzer settings). The main content area is titled 'IAM Dashboard' and features several widgets: 'Security recommendations' with a red notification icon and two items ('Add MFA for root user' and 'Root user has no active access keys'), 'IAM resources' showing counts for User groups (0), Users (0), Roles (2), Policies (0), and Identity providers (0), 'What's new' with a 'View all' link, 'AWS Account' with details like Account ID and Sign-in URL, 'Quick Links' with a link to 'My security credentials', and 'Tools' with a link to 'Policy simulator'. The footer includes 'CloudShell', 'Feedback', and copyright information.

Step-4:

Now click on the Create user.

The screenshot shows the AWS IAM 'Users' page. The left sidebar is the same as in Step 3. The main content area is titled 'Users (0)' and includes a description: 'An IAM user is an identity with long-term credentials that is used to interact with AWS in an account.' Below this is a search bar and a table with columns: 'User name', 'Path', 'Group', 'Last activity', 'MFA', 'Password age', 'Console last sign-in', and 'Acc'. The table is currently empty, displaying 'No resources to display'. At the top right of the main content area, there are 'Delete' and 'Create user' buttons. The footer is the same as in Step 3.

Step-5:

Now give IAM user a name and check the Provide user access to the AWS management console and select the user type as I want to create an IAM user then choose custom password in the console password section then choose password then click on next.

The screenshot shows the 'Specify user details' step in the AWS IAM console. The left sidebar indicates the current step is 'Specify user details' (Step 1), with other steps being 'Set permissions', 'Review and create', and 'Retrieve password'. The main content area is titled 'Specify user details' and contains the following sections:

- User details:**
 - User name:** A text input field containing 'ankita_IAM'. Below it, a note states: 'The user name can have up to 64 characters. Valid characters: A-Z, a-z, 0-9, and + = , . @ _ - (hyphen)'.
 - ☒ **Provide user access to the AWS Management Console - optional**
If you're providing console access to a person, it's a [best practice](#) to manage their access in IAM Identity Center.
- Are you providing console access to a person?**
 - User type:**
 - ☐ **Specify a user in Identity Center - Recommended**
We recommend that you use Identity Center to provide console access to a person. With Identity Center, you can centrally manage user access to their AWS accounts and cloud applications.
 - ☒ **I want to create an IAM user**
We recommend that you create IAM users only if you need to enable programmatic access through access keys, service-specific credentials for AWS CodeCommit or Amazon Keyspaces, or a backup credential for emergency account access.
- Console password:**
 - ☒ **Autogenerated password**
You can view the password after you create the user.
 - ☐ **Custom password**
Enter a custom password for the user.

The bottom of the console shows the 'CloudShell' button, a 'Feedback' link, and the copyright notice: '© 2025, Amazon Web Services, Inc. or its affiliates. Privacy Terms Cookie preferences'.

Step-6:

Now select Attach policies directly in the Permissions options. Now check the AmazonS3FullAccess box and click on next.

The screenshot shows the 'Set permissions' step in the AWS IAM console. The left sidebar indicates the current step is 'Set permissions' (Step 2), with other steps being 'Specify user details', 'Review and create', and 'Retrieve password'. The main content area is titled 'Set permissions' and contains the following sections:

- Permissions options:**
 - ☐ **Add user to group**
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.
 - ☐ **Copy permissions**
Copy all group memberships, attached managed policies, and inline policies from an existing user.
 - ☒ **Attach policies directly**
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.
- Permissions policies (1/1328)**
 - A search bar contains 's3' and a 'Filter by Type' dropdown is set to 'All types'. It shows '16 matches'.
 - A table lists policies with columns: Policy name, Type, and Attached entities.
 - The table contains the following data:

	Policy name	Type	Attached entities
☐	AmazonDMSRedshiftS3Role	AWS managed	0
☒	AmazonS3FullAccess	AWS managed	0
☐	AmazonS3ObjectLambdaExecutionRol...	AWS managed	0
☐	AmazonS3OutpostsFullAccess	AWS managed	0

The bottom of the console shows the 'CloudShell' button, a 'Feedback' link, and the copyright notice: '© 2025, Amazon Web Services, Inc. or its affiliates. Privacy Terms Cookie preferences'.

Step-7:

Now review the account and click on create user.

IAM > Users > Create user

28_Ankita

Step 1

Specify user details

Step 2

Set permissions

Step 3

Review and create

Step 4

Retrieve password

Review and create

Review your choices. After you create the user, you can view and download the autogenerated password, if enabled.

User details

User name

ankita_IAM

Console password type

Autogenerated

Require password reset

Yes

Permissions summary

Name	Type	Used as
AmazonS3FullAccess	AWS managed	Permissions policy
IAMUserChangePassword	AWS managed	Permissions policy

Tags - optional

Tags are key-value pairs you can add to AWS resources to help identify, organize, or search for resources. Choose any tags you want to associate with this user.

No tags associated with the resource.

Add new tag

You can add up to 50 more tags.

Step-8:

Now download the csv.

IAM > Users > Create user

28_Ankita

User created successfully

You can view and download the user's password and email instructions for signing in to the AWS Management Console.

View user

Step 1

Specify user details

Step 2

Set permissions

Step 3

Review and create

Step 4

Retrieve password

Retrieve password

You can view and download the user's password below or email users instructions for signing in to the AWS Management Console. This is the only time you can view and download this password.
